1　web server log

Information on user activity on the web server is located in the web server log file. Web server logs are the primary source of data for user activity processing. It is called clickstream data. Spiliopoulou et al. [**?**] formally defined web server log. Let U denote all possible web requests on a web site. This set consists of all static pages and pages that can be dynamicaly generated according to input parameters. The web server log L is list of page requests from the set U. Records in the list L are ordered by the timestamp of the request.
